Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The MAS can be used for modulating CC monclassical cadherin mediated functions. They can be used for e.g. CC inhibiting adhesion of nonclassical-cadherin expressing cells in a CC mammal, enhancing delivery of a drug through the skin of a mammal, cenhancing delivery of a drug through the skin of a mammal, companies in a mammal, inhibiting cancer in CC angiogenesis in a mammal, inducing apoptosis in a mammal, stimulating CC expressing cell, preventing or treating obesity in a mammal, stimulating control blood vessel regression in a mammal, enhancing delivery to the CC increasing vasopermeability in a mammal, enhancing drug delivery to the CC increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating synaptic stability in conclassical cadherin-expressing cells, inhibiting synaptic stability in conclassion of foreign tissue in a conclassion of foreign tissue in a conclassion of foreign tissue in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glitamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 16-DEC-1999;

cc sequences. (1) is useful as hybridisation probes, polymerase chain (creaction (PCR) primers, oligomers, and for chromosome and gene mapping, cand in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed (C) in diagnostics as expressed sequence tags for identifying expressed (C) genes. (I) is useful in gene therapy techniques to restore normal (C) expressed in the control of the control of (II) or to treat disease states involving (II). (II) is (II) as (II) and its binding partners are useful in medical imaging (C) sites expressing (II). (I) and (II) are useful in medical imaging (C) sites expressing (II). (I) and (II) are useful for treating disorders (C) polypeptide and polymucleotide sequences have applications in (C) polypeptide and polymucleotide sequences have applications (C) control of genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and (C) amino acid sequences of the invention. Note: The sequence data for this content of the printed specification, but was obtained in (C) electronic format directly from MIPO at the printed specification of the content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

                                                                                                                                                                                                                                                                                                                                                                                                                                The ini-1 protein may serve an an internal receptor for retrovirus integrase enzymes, and may be responsible for targeting integration to active regions of the chromosome. The ini-1 protein can be expressed in prokaryotic or eukaryotic host cells. It is useful for screening cpds. that disrupt retrovirus (esp. HIV-1) integrase-ini-1 protein interaction and thereby disrupt the retrovirus life cycle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-NOV-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens

(a) an oligo-dT primer and an oligonucleotide complementary to the

complementary strand of a polynucleotide which comprises one of the 5602

mucleotide sequences defined in the specification, where the

complementary strand of a polynucleotide which comprises as the combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary to a combination of a polynucleotide comprising a sequence complementary to a

complementary to a comprise at least 15 nucleotides and the combination of

complementary to a sequence, where the

complementary to a sequence is selected from those defined in the

complementary to a sequence is selected from those defined in the

complementary full-length cDNAs. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

compassing the primer set on the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

complementary in the primer allow obtaining of the full-length

complementary in the primers allow obtaining of the AAH13528 and

complementary without any specialised methods. AAH03166 to AAH13528 and

complementary in the primer set of the above the complementary to a

complementary in the primers and AAH13632 represent

complementary to the primer set of the comprise of the complementary to a

complementary to the comprise of the comprise and complementary to a

complementary to the comprise and the complementary to a

complementary to the comprise and comprise and complementary to a

complementary to the comprise at the comprise and comprise a

CC length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the

cc complementary strand of a polynucleotide which comprises one of the 5602

CC nucleotide sequences defined in the specification, where the

cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination

cc of an oligonucleotide comprising a sequence complementary to the

cc complementary strand of a polynucleotide which comprises a 5 -end

cc equence and an oligonucleotide comprising a sequence complementary to a

cc polynucleotide which comprises a 3 -end sequence, where the

cc oligonucleotide comprises at least 15 nucleotides and the combination of

cc oligonucleotide comprises at least 15 nucleotides and the combination of

cc polynucleotide comprises at least 15 nucleotides and the combination of

cc polynucleotide comprises at least 15 nucleotides and the combination of

cc principal comprises at least 15 nucleotides and the combination of

cc particularly full-length cDNAs. The primers selected from those defined in the

cc detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

cc DNAs easily without any specialised methods. AAH03166 to AAH13628 and

cc present human amino acid sequences; and half1362 represent

cc present invertice.

cc present invertices all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQ ID NO 13301; 2537pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        detection; diagnosis; antisense therapy; gene therapy.

                                                                                                                                                                                                                             CC NAY92331-37 were isolated in a modified yeast two hybrid system using CC NIKI protein as "bait". These are known sequences which are NIK1 CC interacting proteins. The invention concerns purified complexes of a NLK1 CC protein and a NLK1 protein-interacting protein, where the interacting protein is chosen from TrkA, protein phosphatase lalpha, 14-3-3epsilon, CC alpha-tropomyosin, vimentin, p0071, Ini-1, IP-1, IP-2, IP-3, IP-4, or IP-CS. NIK1 (also referred to as Nek2) is a human homologue of the CC aspergillus nidulans mitotic regulator, NIMA kinase. NIK1 is a CC serine/threonine-specific kinase and is thought to play a key role in CC cell-cycle events leading to the onset of mitosis. The complexes, their CC derivatives and NIK1 or NIK1-IP protein and DNA sequences, etc. are CC useful for treating or preventing a disease or disorder involving CC aberrant levels of the complex or protein. Such disorders include cancer, CC hyperproliferative disorders, neurodegenerative disorders (cc cardiomyopathies, viral infections and metabolic disorders

                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL040-ABL16175) and the encoded proteins (ABE7737-ABB77272). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antigen protein (IAP) in any phase of their life cycle. The peptides of the invention compete with IAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 16 AA;

The chimeric polypeptides comprise a polypeptide segment that exhibits histone acetyltransferase activity, and a polypeptide segment that exhibits histone acetyltransferase activity, and a polypeptide segment having 40% or greater sequence identity to a subunit of a histone deacetylase chromatin-associated protein complex. The chimeric polypeptides are useful for determining gene expression profiles in specific cells, for modulating gene expression in specific cells, and for making genetically modified eukaryotes. The present sequence represents an exemplary histone deacetylase chromatin-associated protein complex

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  internal ribosome viral life cycle;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABG72115;

score greater t
and is derived is the number of results predicted by chance to have a ater than or equal to the score of the result being printed, rived by analysis of the total score distribution.

New compound containing acidic and aromatic amino acids, useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

Claim 1; Page 15; 19pp; English.

The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La untigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphat (RNA) (N).
SUBUNIT: This enzyme consists of at least eight subunits.
SIMILARITY: Belongs to the RNA polymerase beta chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   substrates.
